Art Unit: 1645

*Election/Restriction*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-4, and 13-14, drawn to methods of detecting an acid resistant microorganism with monoclonal antibodies, classified in class 435, subclass 7.1.
  - II. Claims 1-4 and 13-14, drawn to methods of detecting an acid resistant microorganism with aptamers, classified in class 435, subclass 6.

2. The inventions are distinct, each from the other because of the following reasons:

Invention I, drawn to methods of detection with antibodies is distinct from Invention II, drawn to methods of detection with aptamers. The antibody is made of amino acids whereas the aptamer molecule consists of nucleotides. Further methods known in the art used to make the polypeptide require different reagents and parameters from the methods of making the nucleic acid.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their separate classification and their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Art Unit: 1645

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mark Navarro whose telephone number is (703) 306-3225.
